

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant(s): HAMPSON, David M., et al.

Atty. Docket: 82047001/P3138-US

Title: **COMPRESSION DEVICE**

Priority From: PCT/GB2004/005207 (10 December 2004); GB 0328774.5 (12 December 2003)

PRELIMINARY AMENDMENT (37 CFR §1.121/MPEP 714.01(e))

Mail Stop PCT
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

To the Commissioner:

Prior to calculation of the filing fee and examination of the above-referenced application on the merits, please enter the amendments on the following pages.

AMENDMENTS TO THE SPECIFICATION (37 CFR §1.121(b))

Please insert the following paragraph at line 2 of page 1 of the specification.

FIELD OF THE INVENTION

Please insert the following paragraph between lines 5-6 at page 1 of the specification.

BACKGROUND OF THE INVENTION

Please insert the following paragraph between lines 20-21 at page 1 of the specification.

SUMMARY OF THE INVENTION

Please insert the following paragraph between lines 8-9 at page 3 of the specification.

BRIEF DESCRIPTION OF THE DRAWINGS

Please insert the following paragraph at line 16 of page 3 of the specification.

DETAILED DESCRIPTION OF PREFERRED VERSIONS OF THE INVENTION

Please insert the following Abstract following the claims (such Abstract also being provided on a separate sheet accompanying this Preliminary Amendment, as per 37 CFR §1.72(b)):

A compression garment (1) that wraps around a limb has a bladder (3) inflated by a pump (not shown) to apply pressure to a specific area of the limb in order to empty the veins in that limb and upon release of that pressure by deflation the bladder (3), there is increased blood flow in the arterial system. The garment (1) also warms the tissues, typically between 32 and 42 degree centigrade, the heating achieved by passing an electric current through a conductive material (5) that converts the electrical energy into heat. The material (5) and an outer layer (6) of the garment are joined at their peripheries enclosing the bladder (3) within. The garment (1) provides all round warming of the limb and gradual compression to a part of the limb at low pressure, proven to be effective in improving arterial blood flow and more comfortable to the user.
